

Cherish the resource

And manage it wisely!

FEATURES AND BENEFITS

- Environmentally friendly.
- Automatically switches between rainwater and mains water supply.
- Provides water saving benefits of up to 40%.%
- Incorporates easily with new and existing buildings.
- Unique technology with patent pending.
- Provides seamless mains back-up in the event of no rainwater or electrical interruptions.
- No double handling of mains water.
- Adaptable to existing pumps and rainwater tanks.
- Built-in backflow protection valve for added safety.
- Can be mounted on pump or on nearby wall.
- Watermark approval license IPC 20009.
- No adjustment necessary.
- Simple to install.

You can depend on Davey!

Produced by Davey Products; Australia's leading designer and manufacturer of water transfer pumps and pressure systems for the rural, domestic, industrial, pool and spa markets, RainBank® is an automatic controller for rainwater harvesting.

Incorporated into the design of new homes or retrofitted to existing properties, RainBank® controls the water supply for toilet and laundry applications by automatically switching the water source from the domestic mains to rainwater when a demand is sensed and rain water is available in the storage tank.

RainBank® is the first product to use rainwater as the water supply for toilet and laundry in metropolitan areas and control it automatically. It can save up to 40 per cent of a household's drinking quality water which is normally used in these applications thereby helping conserve Australia's precious water reserves.

Water saving

RainBank® allows households in metropolitan and regional areas to replace up to 40 per cent of their drinking quality water usage in toilets and washing machines with rainwater. Actual savings will depend on local rainfall, roof area and size of tank.

Seamless and convenient

RainBank® does the thinking for you by automatically switching the water source from the domestic mains to the rainwater supply stored in the tank whenever a toilet is flushed or a washing machine used. If the rainwater supply is depleted at any time or in the case of a power failure, RainBank® automatically supplies mains water as the back up.

Environmentally friendly

RainBank® only operates the pump to pressurise the rainwater when required. Energy costs are minimised as there is no double handling or re-pressurising of the mains water. Daily power consumption figures for a pump and RainBank® system supplying toilet cisterns in a three person dwelling is the equivalent to the operation of a reverse cycle 2,400W air conditioner for 3 minutes a day.

Easy to install

RainBank® can be incorporated into the design of new homes or retrofitted to existing properties. It is easy to install as either a complete system of pump and controller, or as a controller added to an existing pressure pump and tank installation. It is normally mounted on top of the pump; however its design also allows remote mounting onto a wall or nearby location.

Safe

RainBank® has achieved the requirements of Standards Australia's draft Technical Specification ATS 5200.466—2004, for Rainwater tank connection devices. RainBank® also complies with AS3500, AS4020 and features Water Mark approval license number IPC20009, for connection to a drinking water supply.
