

Converting your On-Site Detention Tank

Introductory information

Many people have an On-Site Detention (OSD) tank located in their property. They are usually a large brick or concrete tank located underground.

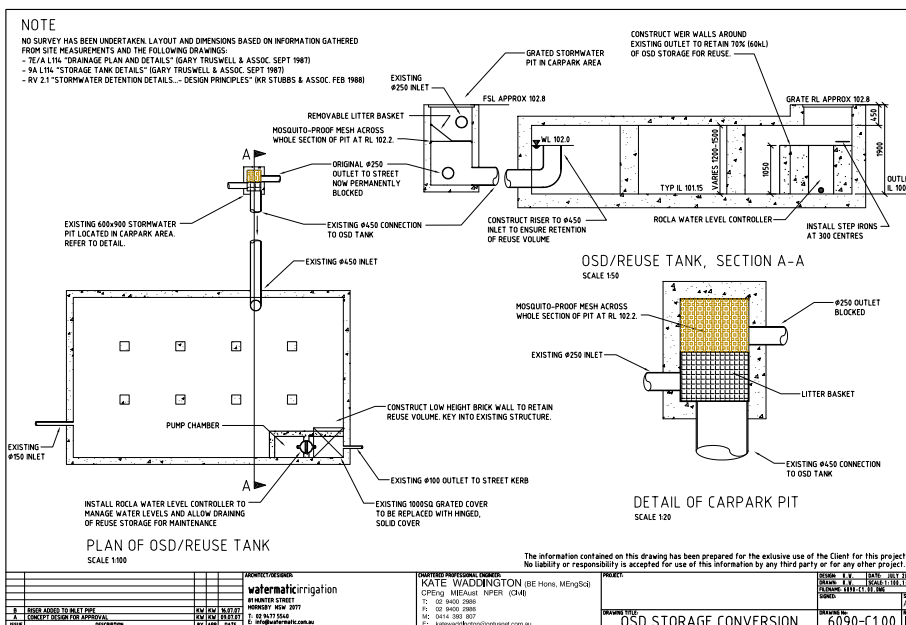

It may be possible to convert your OSD to a water storage tank.

OSD's are designed differently to a water storage tank so there are some changes required. These relate mainly to water proofing and filtering.

Once you capture the water it can be used for garden irrigation, pool top up, flushing toilets, washing machines and for washing cars. The type of use will determine the level of filtration required.

Council consent is required before the conversion can take place. Generally Council require an Engineer prepare a design which shows the volume of storage to be provided and its intended use.

Watermatic Irrigation has experience in converting OSD's to water storage tanks. We can manage the whole process; including liaising with Council, preparing Council documents and actually performing the conversion ensuring it meets regulations. We would welcome your enquiry regarding your own OSD conversion.
