

Simply Slide and Tighten™ for a reliable connection you can trust

Philmac's range of Australian made 3G® metric compression fittings are the solution for the perfect connection every time thanks to Philmac's unique Slide and Tighten™ technology.

Each fitting is pre-assembled and ready to use so there's no need to disassemble the fittings or prepare the pipe prior to use. Simply cut the PE pipe square and slide it into the fitting until you feel the first point of resistance and then tighten the nut to the flange on the body of the fitting.

With Philmac's 3G® metric compression fittings, just slide and tighten and the job's done!

3G® METRIC COMPRESSION FITTINGS

Slide and Tighten™ Easy as...

Water is precious. Put your trust in a Philmac original.

You benefit with Philmac 3G Metric fittings

- Ease of use with Slide and Tighten™ technology
- No loose components
- Outstanding impact, UV and corrosion resistance
- Body can be interchanged with Rural and Safelok fittings
- Easy disassembly
- Designed for minimal pipe twist
- Compact, ideally suited to tight spaces
- StandardsMark and WaterMark approved

The connection you can trust.

PHI0400-09/18

The connection you can trust.

Benefits

No loose components:

Grip ring and seal remain captive in the body when the nut is removed.

Interchangeability:

Rural, Safelok® and 3G® Metric components are all interchangeable as they share a common body.

Made from

Advanced Materials:

The fitting is manufactured from lightweight, high performance thermoplastic materials with outstanding impact, UV and corrosion resistance. The materials used are non-toxic and taint free.

Slide and Tighten™:

Incorporating all the benefits of Slide and Tighten™ technology with 100% positive feedback.

How it works

PRINCIPALS OF OPERATION - COMPRESSION FITTINGS

FULLY OPEN - METRIC COMPRESSION

Fitting is pre-assembled ready to use in the open position with 2 threads showing.

Clearance between the pipe and fitting allows for easy insertion of the pipe.

Collet, which is in relaxed position.

Seal, which is in relaxed position.

The pipe sits against the tapered wedges which minimises pipe rotation.

FULLY CLOSED - METRIC COMPRESSION

Collet bites into the pipe providing end load resistance.

Positive internal stop when the nut meets the flange of the body.

Seal compression is achieved by exploiting the mechanical advantage of the nut thread.

EASY INSTALLATION

1 Cut the pipe square, there is no need to chamfer or lubricate the pipe.

2 Ensure 2 threads are showing and simply slide the pipe in until the first point of resistance is felt.

3 Tighten the nut by hand, and then with a wrench to the point where the nut is touching the flange on the body of the fitting. Do not tighten beyond this point.

Choose from a wide selection of fittings (from 16mm to 63mm) including straight and reducing joiners and tees, elbows, end connectors, caps and blanking plugs.

Benefits

Disassembly:

The fitting has been designed so the grip ring is released as the nut is backed off, enabling the pipe to be simply pulled out of the fitting.

Compact Size:

The size of Metric fittings has been kept to a minimum making this fitting ideal to use in compact spaces.

Minimal pipe twist:

The fitting is designed to minimise pipe twist, reducing the risk of loosening joints.

Visual stop:

The flange on the body of the fitting acts as a visual cue to indicate when the nut is fully tightened. Once the nut touches the flange on the body, the fitting is in a fully tightened state.
